NOT TO SCALE

Groundwater Field Demonstration

This effort involves understanding how groundwater levels adjust following construction of the landfill. The study will span two wet seasons to capture data that will help inform and finalize EMDF's design on the bottom elevation of the landfill.

STATUS

Field work began February 2024, and is on schedule to begin monitoring of groundwater elevations in December 2024.

NOTE: Each activity involves extensive coordination, reviews, and approvals from DOE's regulators.
